Stylish headsets, backed by great technology

Bluetooth®

Bluetooth wireless technology is a short-range communications technology intended to replace the cables connecting portable and/or fixed devices while maintaining high levels of security.

The key features of Bluetooth technology are robustness, low power, and low cost.

Noise-canceling Microphones

Plantronics' Noise-canceling microphones reduce the background noise and so enhance the accuracy of the sounds being transmitted.

They are ideal for noisy environments.

Digital Signal Processing (DSP technology)

Digital Signal Processing is a sound treatment technology which delivers up to 35% reduction in background noise, while maintaining crisp, clear voice transmission.

If you are planning to use your .Audio headset for chatting over the Internet, or for games which rely on voice recognition, it is well worth looking

for a DSP model—especially so, if you live in a lively household where there is a lot of background noise.

Dolby® Headphone Technology

Dolby Headphone technology allows users to wear headphones and listen to music, watch movies, or play video games with the dramatic surround effects of a 5.1-channel soundtrack. Dolby headphone technology enables enjoyment of surround sound without disturbing others. It improves listening comfort and reduces "listener fatigue."

WindSmart™

Plantronics' patent-pending WindSmart technology uses a specially designed material over the microphone to diffuse wind noise, so that even in windy environments—such as the car or the street—users can enjoy crisp, clear conversations.

Multipoint™

Most Bluetooth devices are point-to-point, which means they can only be connected to one device at a time—for example a Bluetooth headset can be connected to a mobile phone, but then can't be used with another device until disconnected from that mobile. Or a PDA device might be connected via Bluetooth with a computer, but then can't also connect to a Bluetooth keyboard.

When a headset has multipoint capability it can receive information from more than one device at the same time. Use the Multipoint-equipped .Audio 920 headset to answer calls from either your mobile phone or PC Softphone.

.Audio 920

Allows headset to be simultaneously linked to two Bluetooth devices and take calls from one or other device at any one time.

TCO '07 certification for headsets

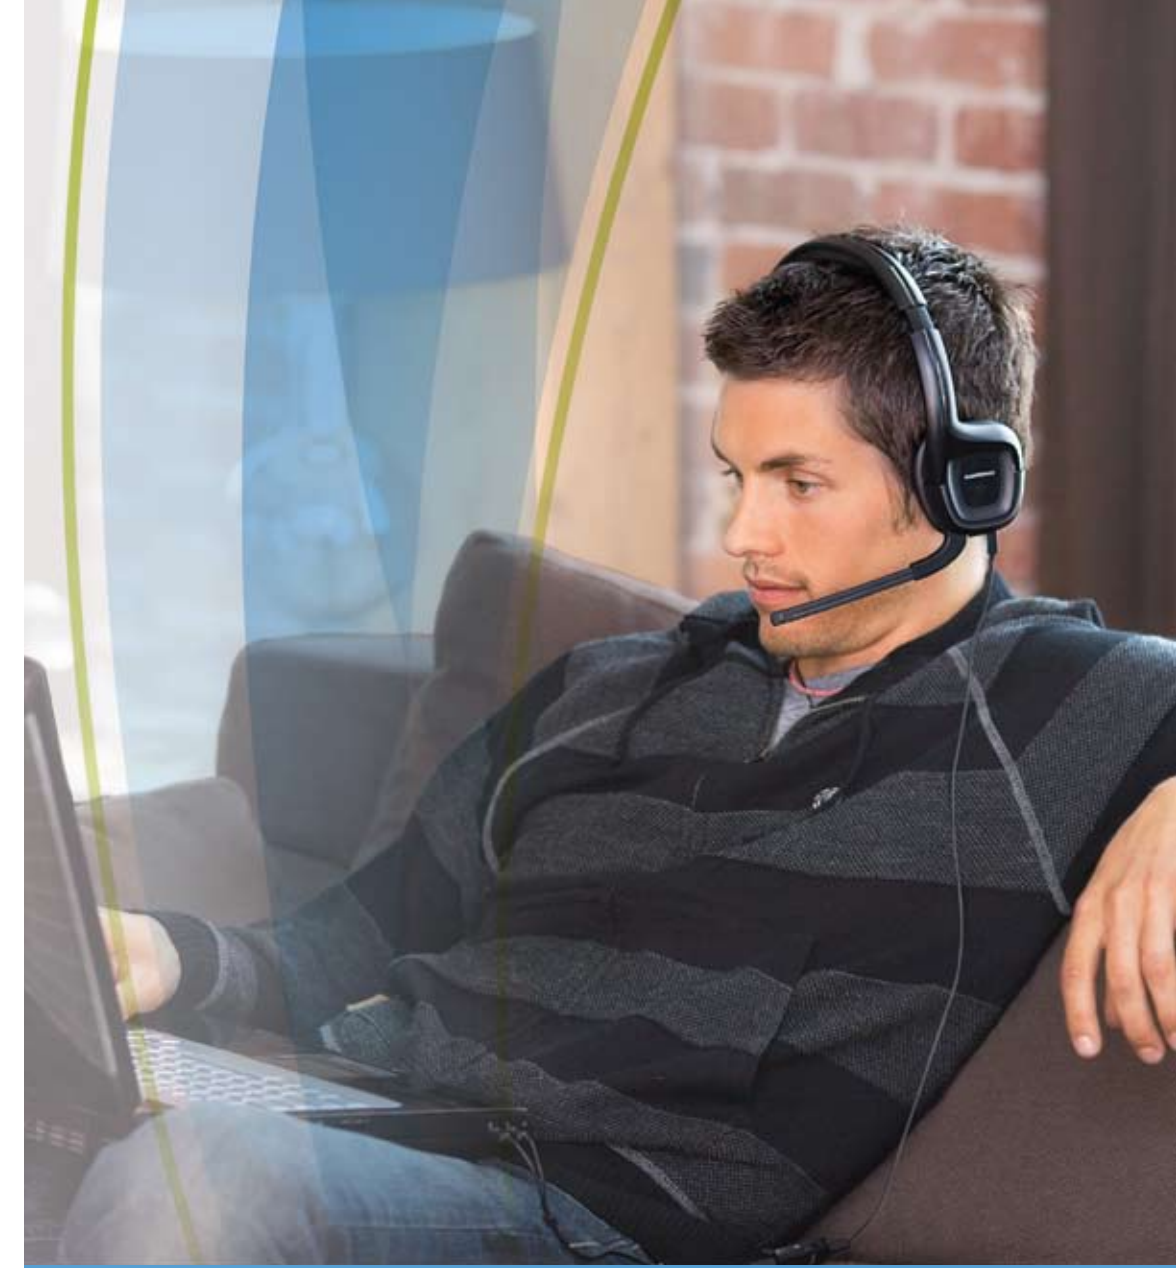

Plantronics is the first manufacturer to adopt the new TCO '07 headset standard across its range of headsets worldwide starting with key models from each of its business segments. The certification means that the headset is designed and manufactured according to some of the strictest performance and environmental criteria in the world. Headsets certified meet TCO Development's requirements on ergonomics, ecology and energy and cordless headsets also meet the requirements on emissions. Visit www.tcodevelopment.com for more details.
